All plans unlock the same Pro features. Cancel anytime in the billing portal — if you cancel, every Free feature still works.

What you get — Free vs Pro

Feature	Free	Pro
Foundation notched-noise programme Core daily therapy, full 8 weeks — tailored to your tinnitus pitch	✓	✓
Morning Boost · Sleep Protocol · SOS Spike Relief Targeted sessions for energy, sleep onset and flare-ups	✓	✓
Frequency calibration · Guided breathing · Symptom diary Pitch match with octave check, breathing pacer, 30-entry diary	✓	✓
ACRN Pattern Tones Four ratio-tuned tones in random sequence to desynchronise firing	2 trial sessions (Week 3)	Unlimited daily · from Week 3
Touch & Sound (Bimodal) Self-timed somatic action paced with sound (Shore-lab pathway)	—	Unlocks Week 5
Fractal Tones Soft, non-repeating melodic chimes — easier to habituate to	—	Available now
Brown Noise sound option Deeper, lower noise colour many find best for sleep	—	Available now
Hearing Profile EQ Preset audiogram-shaped boosts — richer, more comfortable sound	—	Available now
Progress Analytics Residual-inhibition tracking, diary correlations, week projections	—	Available now

Why finish your 8-week programme — with the advanced tools

ACRN and bimodal stimulation only work properly once Foundation notched therapy has begun reorganising the auditory map. That is why ACRN opens at **Week 3** and Touch & Sound at **Week 5** — the medically correct order, not a paywall. People who stop at Week 2 leave before the part the early weeks were *preparing them for*. Continuing with Pro means the moment your brain is primed, the next-phase tools are ready the same day — plus Fractal Tones, Brown Noise and Hearing Profile EQ make the daily sessions more comfortable, which is the single biggest predictor of finishing the programme.

How to subscribe: open the app → tap any locked advanced mode or the Pro banner → choose a plan → secure Stripe checkout. Already paid on another device? Use **Restore purchase** in the upgrade panel. Manage or cancel anytime via **Manage billing**.

Sound-based therapies are supportive tools. They do not cure tinnitus and outcomes vary considerably. If your tinnitus is new, sudden, one-sided, pulsatile, or accompanied by hearing loss or vertigo, see an audiologist or ENT before starting any sound therapy. © 2026 Tinnitus Wizard.
